- London, United Kingdom

EDUCATION

MSc Advanced Computer Science

Queen Mary University of London
(2025 – 2026) Pursuing

BE Computer Science

Pune University
(2016 – 2021)

SKILLS

- Python
- SQL
- Automation
- Agentic AI
- Dev - Ops
- RPA
- Problem Solving
- Root Cause Analysis

ABHISHEK PADALKAR

AI Automation engineer

With over 4 years of experience architecting and troubleshooting complex end-to-end workflows within the UiPath Ecosystem. At Accelirate Softech, I specialized in business process mapping and delivering high-availability RPA strategies using Python, SQL, and Power Automate. Having spearheaded global automation deployments, I am now pivoting my expertise toward the development and maintenance of Agentic AI-based automation. I aim to leverage my deep understanding of process logic to build self-correcting, intelligent agentic systems that transcend traditional rule-based constraints.

WORK EXPERIENCE

AUTOMATION ENGINEER – ACCELIRATE SOFTECH

PROJECT - RPA DEVELOPMENT AND MAINTENANCE USING UIPATH ECOSYSTEM

(DOMAINS - FINANCE AND ACCOUNTING, SALES & LEAD MANAGEMENT)

08/2021 – 09/2025

- ❖ Collaborating with business analysts, clients and other stakeholders to make sure the mechanics of the process matches their vision.
- ❖ Spearheading the development and maintenance of RPA-based automation workflows and processes using UiPath Ecosystem, ensuring seamless business operations.
- ❖ Enhancing existing RPA workflows to guarantee automation quality and efficiency.
- ❖ Streamlining deployment processes for production automations, optimizing development and testing procedures.
- ❖ Monitoring system performance, identifying and resolving issues to enhance automation processes.
- ❖ Implementing version control systems to track automation codebase changes.
- ❖ Automating L1 monitoring checks using UiPath and PowerShell.
- ❖ Implementing remote pre-checks to monitor running automation so that the errors or job faults can be prevented, saving valuable business time and effort of manual processing.

PROJECTS

1 – LINKEDIN JOB SEARCH AGENT

Search, analyze, shortlist and apply to jobs according to given preferences and skills.

Tools – [Python, pgvector, SupaBase, Playwright, LangGraph, LLM, Embedding models]

2 - ELT DATA PIPELINE

Extract movie data from various sources and use transformation to supply quality data for analytics

Tools – [Python, SQL, Apache Spark, Docker, GIT Hub, Airflow, Databricks, AWS S3, AWS EC2, PowerBi]
